BCBA, Medical Student, Data Scientist, and Founder Building Technology for Behavioral Health

LinkedIn

GitHub

I work at the intersection of applied behavior analysis, medical education, data science, and software product development. My focus is building practical, privacy-aware tools that make complex behavioral-health and learning workflows easier to understand and use.

SELECTED EXPERIENCE

Board Certified Behavior Analyst

Since 2025

Behavior-analytic practice centered on assessment, individualized programming, skill development, caregiver collaboration, and team support.

- Functional behavior assessment and behavior intervention planning
- Skill-acquisition programming using evidence-based teaching approaches
- Caregiver collaboration and RBT supervision

Founder

NeuroPath LLC

Builds behavioral-health learning products and operational tools, with clear boundaries between public products, internal prototypes, and archived work.

- Founder and product strategy for NeuroPath
- Co-founder and co-builder of jointly developed Bela Data Lab products
- Privacy-aware product design for behavioral-health contexts

Data Scientist and Software Product Builder

Applies data analysis, software engineering, and workflow design to learning, operations, and behavioral-health product problems.

- Python and SQL analysis workflows
- Typed web application development and testing
- Local-first automation and synthetic-data demonstrations

Data Engineer

October 2022 - January 2023

The McVay Company, Inc.

Worked in a government-related data engineering role. Public copy excludes client, agency, clearance, and system details.

- Data engineering in a government-related environment
- Scope intentionally bounded to verified, non-sensitive facts

ABA Technician

2017 - 2019

Earlier applied behavior analysis experience supporting skill development and behavior-change programs.

- Direct implementation of behavior-analytic programming
- Earlier ABA experience also included work with Connex Family Services

SELECTED PRODUCT WORK

Bela Behavior Data Lab

Co-founder and Co-builder

A browser-local operations workspace that turns Rethink appointment exports into reviewable dashboards, follow-up views, and report-ready outputs.

RBT Practice Hub

Founder and Product Builder

A static study application that organizes practice across the 19 RBT Initial Competency Assessment tasks with original review materials and local progress tracking.

Bela Data Lab Caregiver Academy

Co-founder, Product Builder, and BCBA Contributor

A caregiver-facing learning library that translates behavioral concepts into guided lessons, practical scenarios, knowledge checks, and printable tools.

StepSpark

Creator and Product Builder

A visual-learning prototype for rapid USMLE Step 1 recall, structured around source-aware cards, progressive disclosure, and learner-controlled review states.

EDUCATION

Doctor of Medicine Candidate Ross University School of Medicine Currently completing requirements leading into the clinical phase, including USMLE Step 1.	Expected 2028
M.Ed. in Special Education George Mason University	2020
Graduate Certificate in Applied Behavior Analysis George Mason University	2020
B.S. in Neuroscience George Mason University	2018

CREDENTIALS

M.Ed.
Board Certified Behavior Analyst (BCBA)
Licensed Behavior Analyst - Virginia
Licensed Behavior Analyst - North Carolina
Licensed Behavior Analyst - New York

SELECTED SKILLS

Behavioral science and ABA Functional behavior assessment · Behavior intervention planning · Functional communication training · Discrete-trial and natural-environment teaching · Skill-acquisition programming · Caregiver collaboration · RBT supervision	Data science and engineering Python · SQL · Statistical analysis · Regression, classification, and clustering · Data visualization · Workflow automation · Operational reporting
Software and product building TypeScript and React · Accessible interface design · Testing and static deployment · Local-first data handling · Browser automation · Product workflow design · Privacy-aware prototyping	Neuroscience and research methods Computational neuroscience · Neuroimaging · Image analysis · ImageJ · NeuTube · Vaa3D · Three-dimensional neuron reconstruction
Leadership and entrepreneurship Founder-led product development · Cross-domain problem framing · Clinical and technical collaboration · Product scoping · Evidence and privacy boundaries	

RESEARCH EXPERIENCE

Computational neuroscience and neuroimaging research George Mason University Contributed to image-based neuroscience work involving neuron tracing, reconstruction, and interpretation of three-dimensional biological structures. Supported methods: Image analysis, Image slicing, ImageJ, NeuTube, Vaa3D, Three-dimensional reconstruction. <i>Presented as research experience only. No project result, performance metric, award, publication, formal presentation, dataset, or laboratory affiliation is claimed.</i>
